GETTING UP SPEED

Making the most of your PC!!

PC's are awkward things. You care for them, clean them, even feed them with great games but still they are temperamental! This sheet is an addition to the information contained in the manual. To get the very best out of your PC you might want to read the text below....

Here we have examples of config.sys and autoexec.bat files which will optimise the setup on your PC. The lines marked * are essential to run **The Orion Conspiracy**.

<config.sys>

* C:\DOS\HIMEM.SYS

gives access to memory manager above 1 meg.

* C:\DOS\EMM386.EXE RAM

memory manager required for 'Orion'.

BUFFERS = 15,0

buffers required for 'Orion'.

FILES = 40

files required for 'Orion'.

STACKS = 9,256

required for DOS.

LAST DRIVE = E

must be one letter higher than the letter of your CD ROM drive, ie our CD ROM in this case is the drive.

* DOS=HIGH

increases the amount of base memory available.

* DEVICEHIGH=C:\PANA\CMKE.SYS/D:MSCD000/N:1

device driver for CD ROM drive where MSCD000 is the name of your drive (must be matched in autoexec.bat - see below).

<autoexec.bat>

PROMPT \$PSG

sets your DOS prompt to display of current directory.

PATH=C:\C\DOS

allows access to DOS commands.

* LH C:\DOS\MSCDEX.EXE /D:MSCD000/M:10/E

required for CD ROM drive (note: MSCD000 is the same as in config.sys).

LH C:\DOS\SMARTDRV.EXE/E512 128

optional disk cache (you may wish to remove this line if you do not have enough extended memory to run).

There is additional information in your

The Orion Conspiracy manual. If you still have problems you can contact Domark's **Customer help-line** on 44(0)181-780-2224.
